About

Angular frontend developer with **7 years** of commercial experience, including **leading** frontend teams of 2–5 engineers. I specialize in building complex SaaS, on-premise, and B2B products with heavy reliance on reactive programming and modern architectural approaches like Feature-Sliced Design. I've taken a product from scratch to its first successful release, delivering scalable, maintainable, and high-performance applications. Passionate about clean architecture, and end-to-end ownership of the frontend.

Skills

Frontend: Angular (16+), RxJS, NgRx, Ngxs, Nx, Signals, Standalone Components, Typescript, Javascript (ES6+)

Testing: Jasmine, Karma, Jest, Cypress

Architecture: Feature-Sliced Design, Nx monorepo, DDD

Build & CI/CD: Webpack, Vite, GitHub Actions

UI & Accessibility: HTML5, CSS3, SASS, Angular Material, Responsive Design

Practices: Agile/Scrum, Code Review, Git, Linux

Experience

Bimeister: 06/2023 - 07/2025 (2+ years)
(Industrial SaaS platform for asset and work management)

- Led a frontend team of 3 engineers, distributed tasks and ensured timely delivery
- Migrated the project to an Nx monorepo, cutting build times by ~32% and improving code sharing.
- Created shared feature components that reduced duplicate code and accelerated development for adjacent teams.
- Expanded the internal UI kit library by 10+ components, increasing UI consistency and team velocity.

Technologies: Angular, Typescript, RxJS, Nx, DDD, Ngxs, HTML5, CSS3, SCSS, Jasmine, Karma, Cypress, Gitlab

B2Broker: 02/2022 - 05/2023 (1,5 years)

- Established the foundation of feature-sliced architecture in a greenfield project, ensuring long-term scalability.
- Rewrote the company's core product from scratch and led it to its first successful release.
- Actively participated in cross-team code reviews, mentoring junior developers and raising code quality.
- Covered 84% of the project with tests, which simplified further development and support

Technologies: Angular, Typescript, RxJS, Jest, Vite, HTML5, CSS3, SCSS, Jira, Git

Solarlab: 08/2018 - 02/2022 (3,5 years)

(Custom B2B platform & marketplace development for enterprise clients)

- Grew from trainee developer to senior Angular developer within 3.5 years.
- Interviewed and evaluated 20+ engineering candidates, contributing to team scaling.
- Refactored legacy parts of the product and introduced lazy modules and resolvers, improving page load performance by ~27%.

Technologies: Angular, Typescript, RxJS, HTML5, CSS3, SCSS, Jira, Git, Webpack, Javascript

Education

Sevastopol National Technical University, Sevastopol

Bachelor of Science in Computer Science and Engineering

2014-2018

Microsoft Certified Professional: Exam 70-480 – Programming in

HTML5 with JavaScript and CSS3
